

# Why **you** should know that

*“Scratching can be more than  
just an itch”*

**Intrahepatic  
cholestasis of  
pregnancy (ICP) is  
a liver condition  
that affects around  
5,500 women each  
year in the UK**

- ◆ The main symptom is itching
- ◆ It can be mild or so severe that mothers-to-be scratch themselves raw
- ◆ It's not life-threatening to the woman, but it can cause stillbirth
- ◆ It can be treated
